■ Satin Black

QIKPOST

Powered either by our QIKPAC battery for HP USB charging, or from mains for mains power.

■ Black with orange cap and trim

A black, wedge-shaped power and data outlet is mounted on a light-colored wooden desk. The outlet features several ports, including power outlets and USB ports. In the background, there is a beige office partition wall and a blue ceiling with a white light fixture. A white vertical cable management tube is also visible.

A versatile range of power, data, AV, and USB charging modules that can be either installed on their own or housed in one of our many mounting options.

These are just some of the nationalities we cater for.

For more information on other power socket options, please
get in touch or visit our website.

From the beginning OE products have been designed and built with the idea of reuse. The majority of our products, built in our UK factory in Wakefield, West Yorkshire, or in Sydney, Australia, are made up of modular components to ensure we can accommodate everyone of our customers' needs. The manner in which our products are installed, with their unique plug and play system, means they can be disconnected and reconnected with ease, mounted and dismantled with minimum effort to ensure their usefulness

remains despite the inevitable office change around. The modularity allows us to supply the entire world with each country's respective power outlet without wasteful unit redesigns and limited lifespan. We can design new and innovative products but use the same components saving precious materials and reducing our potential carbon emissions. TUF-R USB charging modules are a prime example and have been recognised as the 2023 Australian Business Awards Eco Innovation of the Year.

Scan here with your smartphone to read our full 2023 ESG Report

Scan to read how TUF-R modules enable eco-friendly commercial spaces

Achieving net zero emissions for any manufacturing company is a challenge. Although we would like to source our materials and components locally, like most manufacturers we source materials and components from many places around the world.

In order to make the biggest impact in the shortest amount of time we have decided to focus on areas where we have the most control while at the same time making an impact on the wider issue at a more reasonable pace to ensure the security of the business.

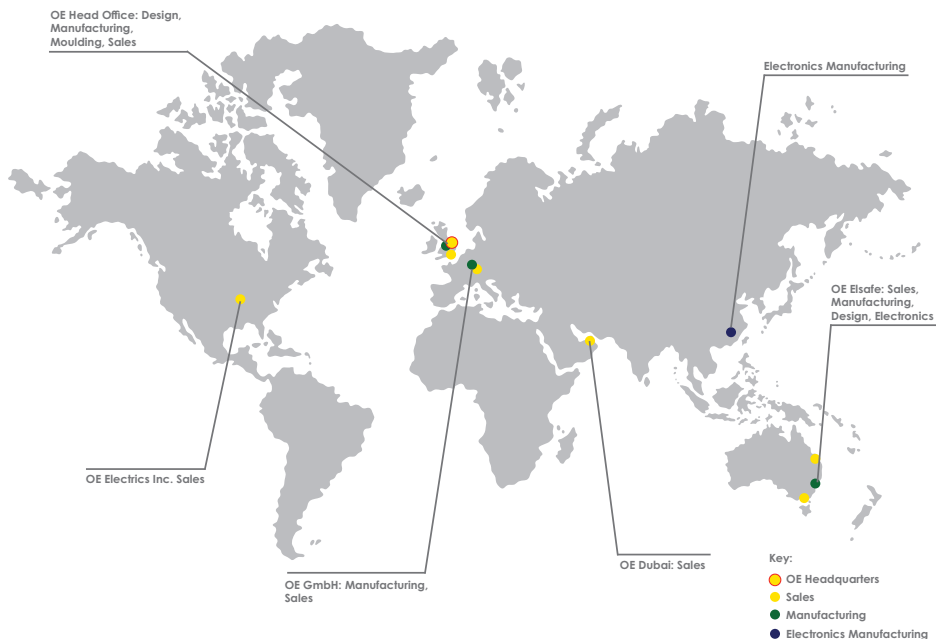

OE is committed to achieving net zero operations by 2035.

Here's some progress so far from 2022* ...

- We recycled 20 tonnes of cardboard
- We recycled 12 tonnes of plastic
- We recycled 6 tonnes of metal
- We recycled 3.5 tonnes of wire

* Figures based on Base Year April 2021-2022
